

Earthquake Timeline Card Sort Activity

Heat from the earth's core makes the temperature of the mantle rise.

twinkl.co.uk

Convection currents lead to the slow movement of the **tectonic plates**.

twinkl.co.uk

When two plates move towards each other, they can get jammed together.

twinkl.co.uk

Pressure builds up as the plates are forced together - but they are still locked tight.

twinkl.co.uk

Eventually, the plates give way and jolt past each other.

twinkl.co.uk

The built-up energy is released as **seismic waves** and an earthquake occurs.
