

Homeostasis Worksheet

In **negative feedback systems**, the response reverses a change in a controlled condition

In **positive feedback systems**, the response strengthens the change in a controlled condition.

State whether each of the following indicates negative or positive feedback:

1. _____ If blood temperature rises too high, specialized neurons in the hypothalamus of the brain sense the change. These neurons signal other nerve centers, which in turn send signals to the blood vessels of the skin. As these blood vessels dilate, more blood flows close to the body surface and excess heat radiates from the body.
2. _____ If the blood temperature falls too low, specialized neurons in the hypothalamus of the brain sense the change and signals are sent to the cutaneous arteries (those supplying the skin) to constrict them. Warm blood is then retained deeper in the body and less heat is lost from the surface.
3. _____ Part of the complex biochemical pathway of blood clotting is the production of an enzyme that forms the matrix of the blood clot. This has a self- catalytic, or self-accelerating effect, so that once the clotting process begins, it runs faster and faster until, ideally, bleeding stops.
4. _____ During childbirth stretching of the uterus triggers the secretion of the hormone oxytocin, which stimulates uterine contractions and speeds up labor.
5. _____ The walls of arteries stretch in the presence of high blood pressure. Baroreceptors located in these walls also stretch and as a result, a signal is sent to the brain which in turn slows down the body's heart rate. This slows the flow of blood through the arteries causing less pressure. As BP drops the baroreceptors become flaccid and a signal is sent to speed up the heart rate.

Homeostasis Worksheet

Always graph time on the horizontal (X) axis. Label your axes

Problem 1: A patient's body temperature was recorded over a 24-hour period; the temperature at each hour is listed in the table below. Graph the data in the space provided and state whether it indicates negative or positive feedback.

| TIME | TEMP, °F |
|-------|----------|
| 12 am | 98.30 |
| 3 am | 98.10 |
| 6 am | 98.40 |
| 9 am | 98.90 |
| 12 pm | 98.70 |
| 3 pm | 98.50 |
| 6 pm | 98.60 |
| 9 pm | 98.80 |

[illegible]

TYPE OF FEEDBACK _____

Problem 2: A man with heart disease has his blood pressure monitored closely.

| TIME | BP mm Hg |
|---------|----------|
| 7 am | 200 |
| 8 am | 190 |
| 9 am | 170 |
| 10 am | 150 |
| 11 am | 130 |
| 12 noon | 110 |
| 1 pm | 70 |

[illegible]

TYPE OF FEEDBACK

Homeostasis Worksheet

Recognize normal parameters:

The normal range for blood glucose is 70-110 m/dl

The normal range for blood pH is 7.35-7.45

Problem 3: A woman is being tested for diabetes mellitus. Her blood glucose is measured over a period of time.

| TIME | Blood Glucose m/dl |
|---------------|--------------------|
| 0 | 100 |
| 1 hour later | 120 |
| 2 hours later | 110 |
| 3 hours later | 90 |
| 4 hours later | 80 |
| 5 hours later | 85 |

| | | | | | | | | | | | | | | | | | |
|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|

| | | | | | | | | | | | | | | | | | |
| | | | | | | | | | | | | | | | | | |
| | | | | | | | | | | | | | | | | | |
| | | | | | | | | | | | | | | | | | |
| | | | | | | | | | | | | | | | | | |

TYPE OF FEEDBACK _____

Does the patient always remain within the normal range _____

Does the patient have any apparent problems with glucose regulation? _____

Problem 4: A man with kidney problems is being watched for acid base imbalance.

| TIME | pH |
|-------|------|
| 7 am | 7.45 |
| 9 am | 7.46 |
| 12 pm | 7.44 |
| 1 pm | 7.42 |
| 6 pm | 7.39 |
| 8 pm | 7.37 |
| 10 pm | 7.38 |
| 12 am | 7.40 |
| 3 am | 7.42 |

| | | | | | | | | | | | | | | | | | |
