

Electrical Circuits **Find a Friend (FaF) Activity**

Teacher Instructions

This activity is good for consolidating or checking learning in a plenary or for revision.

Cards can be printed out A4 or A5 and laminated for repeated use.

How to use:

There are 3 types of card:

Orange – Name

Blue – Symbol

Green – Description

Give each student in the class one of the cards. This can be random or differentiated by giving easier cards to weaker students and more tricky cards to higher ability students. Unused cards can be put onto a table for students to go to if they can't find their 'friends'. Where there are more students than cards, give one card to a pair of students.

Students should then move around the room and find their two 'friends' with the matching name, symbol and description. This encourages discussion and students that are unsure can get help from their peers.

Once the students have found their 'friends', the cards can be stuck onto a board, wall or window to form a display that students can refer to if necessary.
